1. SZÉCHENYI SQUARE

The western walls of the castle built on the bank of the River Tisza in the 13th century were situated in the present Széchenyi Square, while the barren field in front of them served as a main market square and as a practice area for the soldiers defending the castle. Following the Turkish occupation, when Szeged regained its former rights and rank of a free royal city, the City Hall, the administrative centre was built here too. The 19th century reshaped the square both in appearance and function: on the southern side majestic palaces were built, then during the reconstruction following the Great Flood of 1879, the castle walls were pulled down. In place of them, eclectic style residential and public buildings were erected and parks were created. The spacious square, covering more than 50,000 m², is lined by ancient plane trees, magnificent magnolia flowers, empress trees and many other unique plants. Among them nicely made statues make us remember some of the influential figures in the history of the city and the country.

2. CITY HALL

The present City Hall is the third building in the same place with the same function. The first building of a modest design was erected in 1728. It was followed by the second one with the same area as the present hall, designed by István Vedres at the turn of the 18th and 19th centuries. After the flood devastating almost the entire city (1879), the square was filled up, so the building became too low and awkward. Ödön Lechner and Gyula Pártos designed another floor and a slender central tower on the original foundation. The neo-baroque City Hall was inaugurated by Emperor Franz Joseph I in 1883, the middle window of the staircase is decorated with his renowned saying: “Szeged will be more beautiful than it used to be”. The phoenix in the middle of the pediment symbolizes the revival of Szeged. The Bridge of Sighs, originally built for the Emperor and his escort visiting the reconstructed city, deserves attention as well. In the court with a unique atmosphere theatrical and musical performances await the audience each summer.
3. KLAUZÁL SQUARE

The value preserving reconstruction of Kárász Street and Klauzál Square was granted with the Europe Nostra Award in 2004. The downtown palaces display the features of the different competing styles of the time, classicism, eclecticism and Art Nouveau. Their versatile, distinctive nature still creates a uniquely harmonic, well-balanced picture. While having a coffee, a cake or an ice-cream, we can have a look at the full-sized bronze statue of Lajos Kossuth, who made his last speech in Hungary from the balcony of the Kárász House, located on the other side of the square. On the eastern side of the square the harmonic building of the former Hotel Europe can be found as well as the New Zsótér House, which was built on the outer piles of the old castle, and where the operations of the reconstruction were directed from.

4. NEW SYNAGOGUE

“Love your neighbour as yourself.” The biblical commandment can be read in Hebrew and Hungarian on the triumphal arch of the New Synagogue built in 1903. The use of the Hungarian language may be attributed to the influence of Chief Rabbi Immánuel Lów, a scholar, who took an active part in designing the building, supporting the work of the architect Lipót Baumhorn with his guidance. The painted glass windows made in the workshop of Miksa Róth and the symbolic glass dome of exceptional beauty are unique ornaments of the eclectic synagogue. The interior is dominated by the entrancing harmony of the ornaments in ivory, golden and blue. The Jerusalem marble closing stone of the altar, the door of the Ark of Convenant made of acacia from the Nile region, the menorahs decorated with precious stones, as well as the wall paintings depicting the plants of the Bible all deserve attention. The synagogue with its excellent acoustics is a special venue for high standard organ and light musical concerts.
The architect Ede Magyar was thirty in 1907, when he constructed Reök Palace, an exemplary piece of Hungarian Art Nouveau. As he was entrusted by the water engineer Iván Reök, Mihály Munkácsy’s nephew, water became the leading motif of the building. It is represented by the row of blue water lilies decorating the snow white facade, the balcony rails evoking whirling water-plants and the animated variety of different wall-surfaces resembling waves. The palace, originally built as a residential building, has been housing the Regional All-Arts Centre since 2007. In the last couple of years visitors have been able to admire works by Picasso, Goya, Chagall and Rembrandt, among others at the temporary exhibitions. REÖK is also a popular venue for musical programmes, smaller theatre performances and other cultural events.

The square was named after the piarist priest and teacher András Dugonics, the writer of the first Hungarian novel (Etelka, 1788). He was a language reformer, creator of numerous terms used in Hungarian mathematical language. His statue, which was erected from public donations, was the first statue in the public places of Szeged. The fountain opposite, inaugurated on the occasion of the centenary of the Great Flood in 1979, is a popular meeting point for the people of Szeged. In the square the principal building of the University of Szeged, the early eclectic palace stands which was originally a secondary school. In front of the university we find the statue of Attila József, who was a student here between 1924 and 1925, and the statue of Albert Szent-Györgyi, the Nobel-prized scientist, who was named as an honorary doctor of the university on several times. At the corner of the square and Kárász Street stands the Unger-Mayer House, designed by Ede Magyar. The lead ladies dancing on the dome of the Art Nouveau palace provide an attraction from a great distance.
7. ARADI VÉRTANÚK SQUARE

In the centre of the irregularly shaped square stands the nicely proportioned equestrian statue of Ferenc Rákóczi II, with the slogan of the War of Independence (Cum Deo pro patria et libertate), lead by him. We can find the memorial column of the Battle of Szőreg nearby, the marble plaque in front of it commemorates the thirteen generals executed in Arad. The Heroes’ Gate is the memorial place of the soldiers from Szeged who died in World War I. On the arch we can see the war theme frescos painted by Vilmos Aba-Novák. The memorial column of the Revolution of 1956 stands in the square too, reminding us of the fact that the events of October were launched by the movements of the students in Szeged. The square is surrounded by several buildings of the university, among which the most important is the building of the Faculty of Science and Informatics, the former piarist grammar school, where Gyula Juhász, one of the most well-known poets of Szeged, studied.

8. RERRICH BÉLA SQUARE

The square was named after the designer of the building complex in Dóm Square, the first remarkable figure in Hungarian landscape architecture, who created the gardens of the bishop’s palace and the university in a modern spirit relying on tradition. His ageless genius is also proved by the fact that in an online poll in 2007 the area around the Votive Church was voted the second most well-known architectural wonder in Hungary. There are two unique statues on the sides of the walk leading to the university lecture halls. The original gothic statue representing Saint George the Dragon Slayer by the Kolozsvári brothers is in Prague, the one standing here is a 20th century copy of the work made in 1373. On the opposite side there is a marble statue representing young men raising the dead butterfly of liberty high, commemorating the participants of the Revolution of 1956.
After the Great Flood (1879) destroying the city, the people of Szeged made an oath to build a majestic catholic church. Following a long period of planning and several debates it wasn’t until 1913 that the construction started. Being too costly, the original plans of Frigyes Schulek were modified by Ernő Foerk. The Cathedral, which is the fourth biggest church in the country, was sanctified on 24 October 1930. Its architecture is characterised by the mixture of Roman, gothic and eastern Byzantine style elements. Its interior features curiosities like the organ with 9,040 pipes, the image of Madonna dressed in shepherds felt cloak and Szeged slippers, as well as the statue “Christ on the Cross” by János Fadrusz, who won the main prize at Paris World’s Fair in 1900. The Cathedral has been broadened with new community spaces since 2016. Among other things, a multifunctional exhibition area received place in the undercroft, and during the redesign of the range of premises below ground level, information desk, pilgrim buffet, art shop and bookshop were formed.

9. Szent-Györgyi Albert Memorial Room

The biochemist Albert Szent-Györgyi (1893-1986) carried on his researches started in Cambridge and Groningen at the University of Szeged as the head of the Department of Medical Chemistry in the early 1930s. In 1932 he identified hexuronic acid extracted from Szeged paprika as vitamin C, then his team developed the paprika-based synthesis of this vitamin. He won the Nobel Prize in Physiology or Medicine “for his discoveries in connection with the biological combustion process with special reference to vitamin C and the catalysis of fumaric acid”. Up to now he has been the only Hungarian scientist who was awarded the most prestigious scientific price in the world for his work conducted in Hungary. The memorial room situated in the Dean’s Office of the Faculty of Medicine presents the life and career of the excellent scientist – besides his awards, plaques his rector gowns and some of his personal belongings can also be seen by the visitors. In addition, the statue of Albert Szent-Györgyi which was erected in 2013 at the Rector’s Office, on the renewed Dugonics tér, commemorates also the scientist on the occassion of his 120th birth anniversary.

10. The Votive Church

After the Great Flood (1879) destroying the city, the people of Szeged made an oath to build a majestic catholic church. Following a long period of planning and several debates it wasn’t until 1913 that the construction started. Being too costly, the original plans of Frigyes Schulek were modified by Ernő Foerk. The Cathedral, which is the fourth biggest church in the country, was sanctified on 24 October 1930. Its architecture is characterised by the mixture of Roman, gothic and eastern Byzantine style elements. Its interior features curiosities like the organ with 9,040 pipes, the image of Madonna dressed in shepherds felt cloak and Szeged slippers, as well as the statue “Christ on the Cross” by János Fadrusz, who won the main prize at Paris World’s Fair in 1900. The Cathedral has been broadened with new community spaces since 2016. Among other things, a multifunctional exhibition area received place in the undercroft, and during the redesign of the range of premises below ground level, information desk, pilgrim buffet, art shop and bookshop were formed.

Tue-Sun: 9 am – 5 pm
Outside the Votive Church stands the Saint Demetrius Tower, the oldest architectural relic of the city. The remains of the church erected in honour of Saint Demetrius of Thessaloniki living in the 4th century is called the Dömötör Tower by the people of Szeged. Its foundation is from the 11th century, its lower, Roman style part is from the 12th century while its early gothic levels were probably built in the 13th century. During the course of the construction of the Votive Church, the tower, almost pulled down, could survive as the baptizing chapel of the church. It was that time when Vilmos Aba-Novák painted the frescos “Baptism of Christ” on the walls of the tower. In the orders of arches of the doorway stones from the roman era were inserted, above them can be found the 12th century Stone Lamb, the oldest sculptural monument of the city. On the first floor of the tower an interactive exhibition area is available where visitors can be acquainted with the history of baptism, and on the second floor the architecture history of the Saint Demetrius Tower is presented by an interactive exhibition.

The square with exactly the same area as the Saint Mark Square in Venice (12,000 m²), bordered by elegant, northern European style buildings, was designed by Béla Rerrich and built between 1928 and 1930. On the eastern and southern side there are university institutes, while the western side is lined by the buildings of the bishop’s palace and the college of theology. The National Pantheon, placed under the arcades, includes over a hundred statues representing the prominent characters of Hungarian history, sciences and arts. The Open Air Festival was first held in front of the Votive Church in 1931. In the past decades after the first, religious themed performance, an abundance of theatrical shows have been amusing the audience in the largest “star-roof theatre” in the country.

The tunes of this unique piece of art by watchmaker Ferenc Csúry could be first heard at the Open Air Festival in 1936. The music clock on the upper level of the building, opposite the main entrance of the Votive Church is a symbol of medieval universities. Twice a day, at 12.15 and 17.45 it shows the school-leaving ceremony of the graduating students at the end of the academic year. Then the eminences of the university council and the graduating students walk around in front of the clock. The basswood figures were carved by József Kulai, whose models were famous Hungarian people, such as Kúnó Klébersberg, András Dugonics, Kelemen Mikes, Sándor Petőfi and István Vedres. The scene is accompanied by the melody of the well-known Hungarian student song “Ballag már a vén diák...” (The old student is saying farewell...). Besides, at every hour the clock plays the song “Szeged híros város” (Szeged is a famous city) as a signal.

Károly Somogyi, prebendary of Esztergom, aimed to make a contribution to the “mental” reconstruction of the city in ruins after the flood by giving Szeged his priceless collection of books in 1881. The encyclopaedic library including books on science, religion, languages, as well as fiction comprised 43,701 volumes. After being housed at different places, the collection was kept in the Palace for Public Education for a longer period, then it moved into the new building erected in Dóm Square in 1984. Since its foundation more than 130 years ago, the collection has been greatly enlarged, containing over a million documents at present. Its most precious part is the memorial library with the collection of Károly Somogyi, the oldest piece of which is a codex called Missale Pragense from 1492.
The building standing at the corner of Somogyi and Kelemen Street is unique in its style, appearance and location. It was built in English romantic style in 1857 on the base of the designs by Károly Gerster. The name of the house, originally a commercial townhouse, then a casino, comes from the dark grey-black colour used on the exterior earlier. Black House is the permanent exhibition place of the History Department of Móra Ferenc Museum, and furthermore, it regularly gives place for temporary exhibitions connected to the history of the city. In the upstairs rooms visitors can see exhibition, where the interesting and valuable pieces of furniture and furnishing articles of civic interior furnishing can be admired by them. The junction, where the striking building decorated with a corner tower stands is unique in Szeged, as all of the buildings standing at the four corners were built in the 19th century, survived the devastating flood, and due to their important role in cityscape, all of them are protected monuments.

The Serbian Orthodox Church stands on the northern side of the Dóm Square, close to the bank of the River Tisza. The Serbians arrived in Szeged in the Middle Ages, moving northward because of the invasion of the Ottoman Empire. In the 18th and 19th century they played an important role in the commercial life of the city and the region. Their recognition is shown by the fact that originally they had the right to build a church in the area within the castle walls. We have records of the existence of two former buildings, so the church consecrated in honour of Saint Nicholas is the third in Szeged. The single-nave, nicely made baroque style church was consecrated in 1778. The layout of its interior is in accordance with the orthodox requirements centring the rococo iconostas embellished richly with gold. János Popovics made the icon screen, one of the most beautiful pieces in Hungary.
The most impressive product of the building fever of the millennium in Szeged is the Palace for Public Culture built in neo-classicist style in 1896. The entrance hall with Corinthian columns covered by a tympanum, the symmetrical structure and the white walls radiate calm dignity. It was intended to give place to the museum of the city and the Somogyi Library. During the directorship of Ferenc Móra (1917-1934) the series of exhibitions expanded, storerooms and restoration workrooms were created. Being a writer and a journalist as well, the director took part in ethnographic fieldwork and he made his mark as an archaeologist by doing excavations in the larger surroundings of Szeged. There is also a room in the museum bearing his name with his personal belongings. In addition to the Móra Ferenc Memorial Room, the exhibition of “Szöged is a famous city” presenting the crafts of Szeged, the exhibition of “All that is gold - Treasures from the Museum vault”, the natural science exhibition and the permanent art collection valuable temporary exhibitions enrich the museum’s repertoire.

In 2019 the building is closed for reconstruction.

Roosevelt tér 1-3.
+36-62/549-040
www.moramuzeum.hu

You can see the remnants of the gate Maria Teresia of the former castle behind the museum. Its foundation corresponds to the ground level of the city before the Great Flood. The height of the aggradation is one meter and a half. The walls of the fortress from the bank of the River Tisza up to Széchenyi Square were almost all demolished after the flood and the remaining parts of the building became exhibition rooms belonging to the Móra Ferenc Museum. The Carrara marble statue of Queen Elisabeth by the sculptor Miklós Ligeti is in the neighbourhood. The River Tisza is the longest river in Hungary, it has its source in the Eastern Carpathians and it meets the Danube flowing through Serbia. The regulation of rivers was the biggest undertaking in the 19th century. It started in the 1840s on István Széchenyi’s initiative following the plans of Pál Vásárhelyi, a hydrographer. The river became navigable, its dried flooding territory was transformed into agricultural areas. Besides advantages there appeared disadvantages as well. The water of a river flows at a greater speed in a straight bed, so dangerous floods are more frequent. The largest disaster in the history of Szeged is the Great Flood happened in 1879, which completely destroyed the city. The present structure of the city with boulevards and avenues is a result of the reconstruction following the flood.
19. BELVÁROSI CINEMA

The Art Deco style building of the Belvárosi Cinema (Downtown Cinema) was built in 1920 based on the plans of the architect Endre Sebestyén. Today, it is the only purpose-built cinema of the period in Hungary still in operation. It has three air conditioned rooms with modern digital cinema screens and 5.1 Dolby sound system and the rooms are named after film professionals related to Szeged. The smaller rooms seat 100 and 50 and were named after the film aesthete Béla Balázs and the film director József Csőke. The 550-seater hall on the ground floor with balcony was named after the Oscar winning cinematographer Vilmos Zsigmond, who was born in Szeged. Cherishing his work, the movie theater hosts the Vilmos Zsigmond International Film Festival every May. Besides spectacular, quality commercial films, it also features world movies, Hungarian contemporary movies, a big variety of film history curiosities and live opera and theater transmissions. Several cultural events are also organized here such as public meetings, literature evenings, concerts, programs for children and psychology presentations.

From January 2019, due to reconstructions, films will be screened only in the Csőke József room.
During the reconstruction, performances and events are held in Délvidék Ház.

20. SZEGED NATIONAL THEATRE

The theatre opened in 1883 is one of the most beautiful eclectic neo-baroque buildings of the city rebuilt from its ruins. Its splendid elegance was given to it by Ferdinand Felner and Hermann Helmer, two theatre architects from Vienna. The semicircular facade is ornamented by the allegoric figures of theatrical art and we can see the statues of József Katona and Ferenc Erkel in the niches on the two sides. The peculiarity of these two artificial stone statues is that they were made by the sculptor Antal Tápai on the spot. The interior presents baroque impetus and ornamentation as well. The frescoes of the ceiling of the theatre housing 680 people were painted by Zsigmond Vajda. The theatre has three sections – opera, dance and drama – the larger building giving place to operas and major plays, while the nearby smaller theatre in Horváth Mihály Street is a home for drama and The Contemporary Ballet of Szeged.
21. DEUTSCH PALACE

The palace was designed by Mihály Erdélyi with majolica ornaments in green, blue and orange and built between 1900 and 1902. It is a spectacular example of the Hungarian art nouveau style, the exterior and the staircases designed by Ödön Lechner upon Erdélyi’s request. The harmonic combinations of colours being applied on the facade which were brave at the time of the construction are made unique by Zsolnay ceramic ornaments inspired by folk arts patterns. The light blue pirogranite tympan waving slightly among the dynamical friezes of the side wings crowns the front of the building, the ornaments being the balconies either closed and porcelain like or with nicely formed ornamental foliages of wrought iron. The entrance door having wrought iron railing deserves attention thanks to its unique craftsmanship.

22. BEREGI HOUSE

The Beregi House is one of the gems in the splendid row of palaces of the Szeged’s cityscape, which primarily is an extraordinary example of the brick architecture and Art Nouveau architectural school. The building is the inspired artistic achievement of Pál Kótay, who, upon the commission of a Szegedian upper vocational school teacher, created one of the masterpieces of the characteristically Hungarian Art Nouveau. His artistic style is well represented by the building, which in its fine details has preserved the outstanding craftsmanship of the local ironsmiths, tinsmiths, carpenters and brick masons. The facade is dominated by the red colour of bricks, the dun-yellow of the clinker bricks and the dark red of the plastered surfaces. The pyrogranite flower ornaments inspired by folk art motifs harmoniously fit in with them. It is worth scrutinizing the magnificent wrought iron ornaments and the finely contoured sgraffito at the bottom of the spire. The ground floor rooms of the building show less of their original spectacle, but the staircase, the internal facade and the circular gallery remind us of a truly fin de siècle spirit.
23. GRÓF PALACE

The palace is a determinant building on Tisza Lajos Boulevard being the biggest protected monument built in Art Nouveau style in Szeged. It was erected between 1912 and 1913 being designed by Jenő Raichl. It was named after Árpád Márton Gróf, an attorney general of the city. A building was erected with impressive volume on a triangular site being bordered by three streets. Its surface is quite varied being proportioned by frontispieces, balconies and niches. The corner balconies embracing the stories are specially designed. We can see motifs from Hungarian folk art and ceramic wall ornaments besides the blue, yellow and golden decoration on the facade evoking the atmosphere of the East. Wrought iron, used and liked so much by Art Nouveau style, appears on this decorative palace in rails on the windows, flower stands and banisters.

24. SZENT ISTVÁN SQUARE AND THE WATER TOWER

A nicely created park and a speciality in the history of industry, the country’s first water tower made of reinforced concrete awaits visitors in Szent István Square. The tower, which can hold 1004.8 m³ of water, was designed by Szilárd Zielinski. It was built in 1904 and has been performing its original function ever since. The whole tower was made of concrete, including the front door and 54.9 m high pole holding the flag. Inside the tower renovated in 2006 there is a Foucault pendulum demonstrating the rotation of the Earth, an exhibition of colourful soda water bottles, as well as an exhibition on the history of physics. Climbing up its many stairs, tourists can get a magnificent panorama from the top of the tower. Around the tower we can find the busts of seven renowned architects who made their mark transforming the cityscape.

Szent István tér
+36-62/558-844
www.szegedvizmu.hu

Open:
April-October, on the first Saturday every month: 10 am - 4 pm.
Groups (min. 10 people) can visit the tower throughout the year by registration in advance, after appointment arrangement.
Registration on working days: 8 am - 3 pm.
The building designed by Frigyes Schulek, completed in 1884, is also called the “Cockerel church” owing to the figure decorating its tower. Its construction is a nice example of the reconstruction and the cooperation following the flood. The place of the church was chosen by Lajos Tisza, royal commissioner, and the lot was given free of charge to the church. The aggradation of the plot was financed by Gregersen Guilbrandt, a Norwegian builder, who – being a protestant himself – was solicitous about the construction of the church. The small neo-gothic style church was built on a triangle shaped lot. The layout resembles a clover with three leaves, its naves are at 120 degree angles to each other. Opposite the church we can see the Protestant Palace, an eclectic style building by Ede Magyar, from 1911.

The Art Nouveau style, four-storey historic building stands on the southern side of Szent István Square. It was built by Jenő Ferenc Raichl, commissioned by József Móricz, a post official, between 1910 and 1912. The house was planned according to the needs of the contemporary upper middle-class. The facade is ornamented with ceramics evoking shepherds sheepskin coat, the walls inside are decorated with Art Nouveau paintings. In the beginning the building had gas lighting and was heated with tile stoves. With the intention of making it modern, they left room for a lift, too, but it was installed only decades later. After World War II it functioned as a council house, its condition deteriorated over time. The house was restored to its original beauty in 2007. The hundred-year-old building presents a nice example of the secessionist architecture of Szeged.
27. ANNA BATH

The white-walled eclectic style building in Tisza Lajos Boulevard, reflecting Oriental effects, designed by Antal Steinhardt and Adolf Lang, was built in 1896. Originally it functioned as a public bath. It took its name from the nearby artesian well drilled in 1927 and its water. The medicinal water was first bottled by Dezső Patzauer. The name of the bath makes us remember his daughter, Anna. The water can be used for digestive problems, applied as a drinking cure, the people of Szeged regularly take it home from Anna Well. The bath awaits visitors with medical treatments, wellness services, as well as offering relaxation on the occasions of night bathings every weekday.

28. ALSÓVÁROSI CHURCH

The Franciscan church dedicated to Our Lady of the Snows and the cloister nearby are precious architectural heritages of Szeged. The church was erected in several steps in neo-gothic style, probably using the remains of the first building from the 12th century. It was consecrated in 1503. Its baroque interior dates from the beginning of the 18th century. There are two icons of Blessed Virgin Mary in it, the one carved by a monk called Antal Graff decorating the main altar, the other one named Black Mary having its original in Czestochowa, Poland. The church and the monastery next to it is the second biggest religious complex in Hungary, keeping its original function. The Franciscan visiting centre presenting the monks’ life awaits visitors offering multi-lingual guiding and programmes rich in content.
29. TRADITIONAL RURAL HOUSE MUSEUM IN ALSÓVÁROS

The God’s Eye motive of the main altar in the Alsóvárosi Church (Lower City Church), the radial lines, became recognizable ornaments of the houses in Alsóváros. The triangle gable of the “sunshine houses” represent the Holy Trinity for religious families. Sándor Bálint (1904-1980), born in Alsóváros (Lower City), was a university professor, excellent researcher of the ethnography and cultural history of Szeged. He studied the religious customs and beliefs of the people living in Szeged and its surroundings. The renovated “sunshine house” gives place for the exhibition on the life of the Southern Great Plain and the consumer goods of the period between the two World Wars. Besides the permanent exhibition the events presenting folk customs in relation with different holidays offer unique programmes for visitors.

30. Szent-Györgyi Albert Agóra

The centre was opened in December 2012 with the aims of presenting the research results of the region in a simple and understandable way and directing children’s attention to natural sciences. The new building of 6750 m² is operated by using modern technology, the heat of the Earth and solar energy. Százszorszép Children’s House, an important cultural facility of the city also moved here. The Informatics History Exhibition is an outstanding attraction founded and operated by the John von Neumann Computer Society, which presents the relics of computers of the glory days (M3, URAL2, Razdan, Szeged “Ladybird”). On the first floor we can see curiosities which were rarities at the time of their production, too, while the rooms on the second floor exhibit 20th century mass-produced computers still able to work. The laboratories were designed to show the interesting features of natural sciences to both young and adult visitors.
31. ZOO SZEGED

The Zoo of Szeged, 45 hectares located in wooded environment only 2.5 km from the city center, offers even one-day programs to visitors and it celebrates its 30th anniversary in 2019. It features animals according to continents, trying to provide their natural environment and living conditions. Nature protection, education and managing endangered species within international conservation breeding programs are top priorities at Szeged Zoo. Besides rarities such as the giant anteater, marmosets, fossa and clouded leopard, visitors can also see several popular zoo animals from meerkats to giraffes. Since 2018, even Asian elephants can be visited. The Zoo is open nearly every day of the year, and it offers zoo education activities, token feeding sessions and even night tours.

32. NAPFÉNYFÜRDŐ
AQUAPOLIS

The four-season “water-city” awaits its visitors with a water surface of 4,400 m² and the longest waterslide working all year round in Europe. The bath complex offers entertainment for all age groups. The main attractions of the facility opened in 2010 are the 223 and 272 meter long giant tube slides starting from a 30 meter high tower accessible with lifts. The joy of sliding is provided for the adventurous visitors by 13 slides, the total length of which adds up to 1,000 meters. The outdoor wellness pool, streaming passages, jacuzzi bubble beds and waterfalls ensure unforgettable entertainment and recreation. Those longing for relaxation and regeneration find ideal surroundings in the “silent wellness” section of the bath. Adventure pools, jacuzzis, massages, Finnish sauna, infrared sauna, Roman steam bath, salt chamber, aroma-therapy cabin and outdoor log sauna are available for guests.
33. ERZSÉBET PARK

Situated in Újszeged in the line of Belvárosi Bridge, the largest park of Szeged has an area of 15 hectares. The wilderness of trees and weed thriving at the place of the present park was transformed by Baron Vilmos Reitzenstein, an imperial officer, colonel of the Italian battalion and his soldiers in 1858. They created a spectacular baroque garden, the axis of which is now lined by giant plane trees, the lawns are shaded by old lindens, oaks and maples. It accommodates the smaller stage of the Open Air Festival and some university sports fields. On the side close to the bridge stands the Saint Elisabeth church. Nearby there is an area for relaxation with a fountain. The park is a popular exercise place for athletes, especially marathoners, triathlonists and handball players, but it is also a venue for May Day and gastronomic festivals.

34. BOTANICAL GARDEN

When the University of Kolozsvár moved to Szeged in 1922, the city donated a 28 acre area of agricultural land to establish a botanical garden. The first plants were introduced by the founding director, István Győrffy. The botanic garden is still owned by the university, as a collection serving education and research, open to the public as well. The garden presents agricultural species in a systematic way, including herbs, dye, fibre and food plants, but it also takes part in the preservation of protected plants. One of the curiosities of the collection is the Indian lotus which arrived more than 80 years ago. In the lake fed by artesian water it found the living conditions appropriate for proliferation and now it represents the largest open-air stand in Central Europe.
